How customise EasyStore?

EasyStore is fully customisable, language choice, modify the user interface labels, customise the various list,...

To change the user interface, Right click +Key CONTROL key pressed on the window background, a window is displayed to customise the labels of the current window.

To change the language, login as administrator, go to Setting menu, select Regional option.

What is the Administrator login?

The login window is displayed when the application is registered or when you click on the Try button in the register window for a demo version.

The Administrator login is "**admin**" and the password is **blank(empty)**.

Later, in the setting menu, you can change the password, but the administrator login is always "admin".

For the first run, you have to login as administrator to setup and customise the application.

How manage the inventory?

The inventory is organised by groups and subgroups. The name and the description are multilingual, that allows to generate the Store and the catalogue in the selected language.

A subgroup is associated to a List of attributes. At the creation phase, the product is linked to a group, and when we select the subgroup, all the attributes of the selected subgroup are displayed to be filled by the user. And those attributes and their values will be displayed in the Product preview. Finally, when you generate the store online or the catalogue online, those attributes are displayed in the Product page.

You can create unlimited values lists that can be used in the attributes of the subgroup.

Is possible to add picture and documents to a product.

To create values lists, go to the Setting menu, select the List option, a window is displayed within a tree structure. First create the different list names, and then the values for each list. For sample: We have a list called Screen, the values possible for this list are: Screen 14", Screen 15", Screen 17", Screen 19",…

To create groups and subgroups and their attributes, go to the Setting menu, select the Groups and subgroups option, a window is displayed within a tree structure. First create the different groups names, and then for each group create the different subgroups names, and finally create the different attributes for each subgroup. For sample, For a commercial activity of computer hardware sale, we can create the following groups: Computer, Scanner, Printer, Network, Accessories, Services,…For the Computer , we can create the following subgroups: Desktop, Laptop, PDA, …For the Desktop subgroup we can create the following Attributes: Processor, Mother card, Screen, Hard drive, Memory,…The Screen attribute can be linked to the Screen Values list created above,..

How create your store or catalogue online?

EasyStore allows to generate within few seconds your catalogue and your store online within the selected language, the look is chosen among 30 templates supplied with Easystore. In the Store generated, the products are organised by Groups and subgroups, and for each subgroup there is an HTML page within the followings information:

Product Reference and Name

Product Description in the selected language

Product picture

Subgroup attributes and their values.

To generate your Store online:

Go to the Setting menu, select Store and Catalogue option, a window is displayed.

Fill the required information:

The language of your site

The home page, the Terms, delivery and Privacy pages.

Select the groups and subgroups to include in your site (All are selected by default).

Fill the Tax options, Shipping mode and their values, Paypal solution account information.

Select the template for your site. Other customise development can be done after a query from your and a quotation from us.

Click on the Apply button to generate the site in local Hard drive.

Once the site is generated locally on your system, you can copy the subdirectory Temp to your hosting. Or you can click on the Button Publish to publish your site to your server using FTP service. For this feature you have to supply the FTP account information of your server.

How host your store online?

The created Store can be hosted at any Hosting provider of your choice. If you don't have a hosting provider, we can do it for you, we have this service, and we have commercial agreement with partners. Please contact us for more information info@cdeasysoft.com

---

What are the paiement gateways implemented in the store online?

Actually, EasyStore is supplied with a Credit card payment mode of our partner Paypal http://www.paypal.com .

If you wish use the Paypal solution, you have to create an account that is fully free and Paypal will take commission of 3 to 4% from that sale product using the Paypal solution.

If you prefer or have another payment solution, for sample your bank solution, we can integrate it in Easystore if you give us all the integration technical instructions.

How create a product preview?

When you create the product, click on the button Product preview, the product preview is displayed and you can print it.
