

## Edge 2004™ Business Management Solution

### About Edge 2004™

Welcome to Edge 2004™, a business management solution developed and manufactured by Integrated Digital Systems/ScanAmerica, Inc (IDSS).

Edge 2004™ is a Microsoft Windows based application that manages the batch capture, classification, storage and retrieval of paper and digital documents, and over 50 other formats including email and attachments. Edge2004 provides built in interfaces to popular workflow and web based collaboration products such as Microsoft's Sharepoint and our J2EE EdgeVault product. It is critical for corporations to meet the document management requirements of the Sarbanes-Oxley Act which impose penalties as severe as imprisonment for corporate executives if they fail to properly manage corporate communications and documents, as well as the requirements of HIPAA for Healthcare Providers. HIPAA's aim is to provide simplification and standardization to the health care industry, as well as protecting personal health information. Edge 2004™ is compliant with all of the standards and requirements for both laws.

The standard out of the box version of Edge 2004™ has a Microsoft Access Database integrated into the product so it is ready to run on most workstations. Edge 2004™ runs Windows 2000 Server and Professional, as well as Windows XP Home and Professional. All of the security features available to you in a Windows NT and 2000 environment are available with Edge 2004™. Edge 2004™ is available in several vertical market versions and can be packaged as a turnkey solution by IDSS or one of its authorized resellers.

OVER

### Specifications:

### Customized Versions

Edge 2004™ was designed by Integrated Digital Systems ("IDSS") a 15 year veteran in the document imaging market, to be the most cost effective document and process management product available in the market. Edge 2004™ can be used as a middleware application for use with most multi-functional devices, the Xerox Document Centre and Xerox DocuShare, EdgeVault, iManage, SharePoint, or as an independent system to acquire process and manage files and documents.

While we are confident that Edge 2004™ will work with almost any open architecture based system and Microsoft compliant products, there will always be exceptions due to configuration conflicts and other factors. For more information about Edge 2004™ features, Xerox DocuShare or Microsoft Products and how they can meet your needs visit our web site [www.idss.net](http://www.idss.net) or [www.edgedepot.com](http://www.edgedepot.com) or contact
