

The purpose of a program is to display selected images and data from computer to other computer.

The program is designed to be used in technical shops and warehouses.

First monitor is facing to a warehouse worker and the second monitor is facing to the

customer. Second computer may be less powerful.

Selected images from desktop, clipboard or from a selected window or slideshow can be

sent to second computer automatically or manually (recommended) through a local area network.

## **Setup**

*In the package are a main program (setupflycat.exe) and image viewer (setupfciv.exe)*
