Coastline Software

XFile Version 2.0

THE XTree compatible file manager for Microsoft Windows...

Many years ago when DOS was popular one file manager dominated the market - this was **XTree Gold**.
This application introduced a simple but very effective concept for a user interface. It included a command bar with predefined commands which could easily be executed with a single key stroke.

XTree Gold offered many functions which are still not available in most of the "modern" file managers, like the Windows Explorer. How about specifying a *File Mask* to display only files that you really want to see and how about *history lists* which will always allow you to select a previously used values (e.g. path name or file name) so you don't have to specify it over and over again.

XFile offers most of the originally functionality of **XTree Gold** within a real Microsoft Windows application. In addition many new functions, like integrated Go To command, File Viewers, Gallery, Web Commands have been added to fully integrate **XFile** into Microsoft Windows.

Feature Summary

- XTree compatible commands
- Log unlimited number of folders and files
- Specify File masks
- History lists
- "Go to" Command
- "Link" Command to files or folders
- Web Commands
